REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

The instant application is directed towards an unobvious improvement in the turbine blade trailing edge cooling art. Specifically, the instant application discloses a first impingement rib parallel to the trailing edge of the elongated blade, a second impingement rib oblique to the first impingement rib and extending towards the trailing edge from the first impingement rib, and a third impingement rib oblique to the first and second impingement rib and also extending towards the trailing edge of the blade from the first impingement rib. The third impingement rib intersects the second impingement rib to form a triangular cavity wherein the first impingement rib and the second impingement rib have a orifice formed in them opening into the triangular cavity.

While it is well known to use impingement ribs in the trailing edge of the of a turbine blade (as shown in US Patent 6,382,907 to Bregman et al.) and a triangular configuration is disclosed in US Patent 6,769,875 to Tiemann, there is no motivation to combine the two references in such a way that would yield the claimed invention.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
